Synopsis

The fourth edition of this standard student text, *Organizing Knowledge*, incorporates extensive revisions reflecting the increasing shift towards a networked and digital information environment, and its impact on documents, information, knowledge, users and managers. Offering a broad-based overview of the approaches and tools used in the structuring and dissemination of knowledge, it is written in an accessible style and well illustrated with figures and examples. The book has been structured into three parts and twelve chapters and has been thoroughly updated throughout. Part I discusses the nature, structuring and description of knowledge. Part II, with its five chapters, lies at the core of the book focusing as it does on access to information. Part III explores different types of knowledge organization systems and considers some of the management issues associated with such systems. Each chapter includes learning objectives, a chapter summary and a list of references for further reading. This is a key introductory text for undergraduate and postgraduate students of information management.

Jennifer Rowley is Professor of Information and Communications at Manchester Metropolitan University and Richard Hartley is Professor of Information Science at Manchester Metropolitan University, UK.

I am not one to return to the assigned reading two or three times, but I am taking an "intro to cataloging" class and I find myself paging through this book every day. It will save your life.

This book was required reading for a class. It is an excellent resource and I plan to keep it for reference in my own home library. I'm sure I will return to it many times during the course of grad school.

needed to buy this book for class. the material is very dense, and i sometimes tell the authors to speak in English. i would not buy it if it was not for my class

as a birthday gift to my husband, very fast, receive it next day. love it . Everything with this product is perfect. feel very good .
